MODE OF ACTION

Aminocid-V injection is the building blocks of protein. Amino acids participate in protein synthesis & play vital role in skeletal muscle function, cell signaling, homeostasis, gene expression and synthesis of hormones. In addition, vitamins are vital for numerous physiological functions in animals, from energy production and immune response to cellular repair and growth. Each vitamin has a specific role that supports overall health and well-being.

INDICATION

- Improves body weight gain & production (egg, meat &/milk)
- Improve production of poultry and large animals.
- Improves FCR
- Improves immunity
- Prevents vitamins, minerals & amino acids deficiency related diseases
- Minimizes stresses (vaccination, diseases, medication, transport, extreme hot/cold weather, weather changes & molting period)
